LAB-3 : Static Website Hosting

Aim:

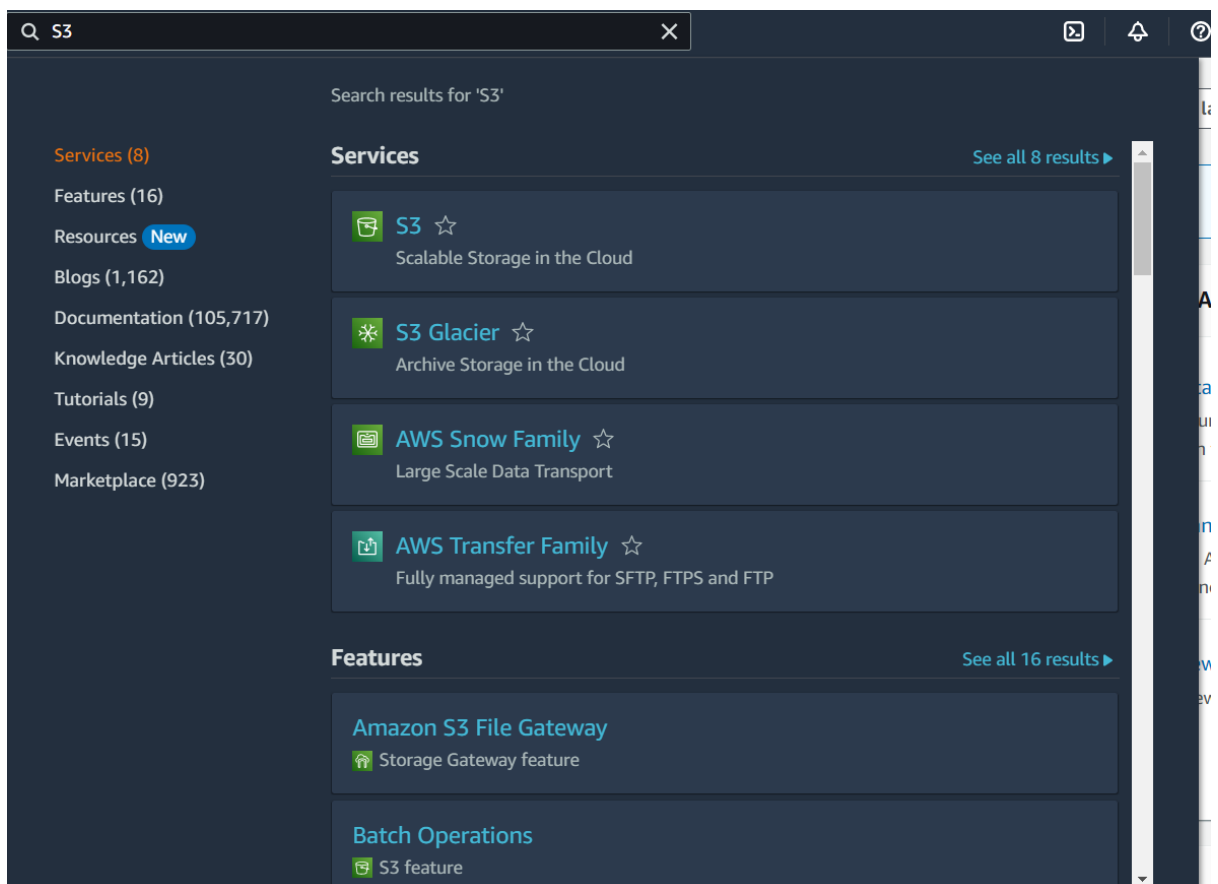

Exploring the use of S3 service in amazon.

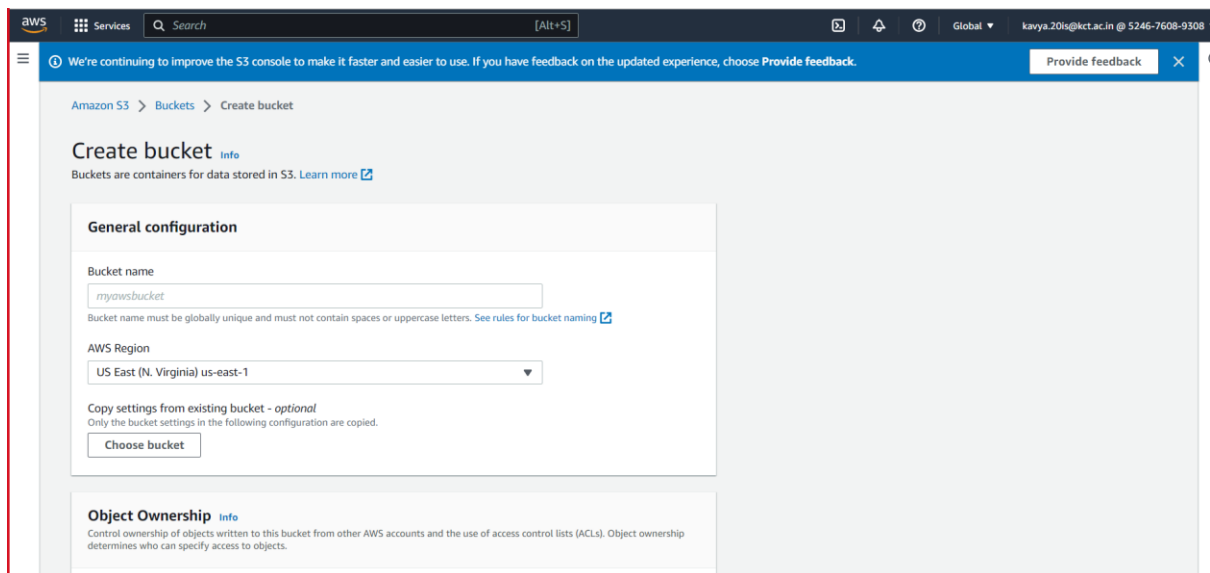

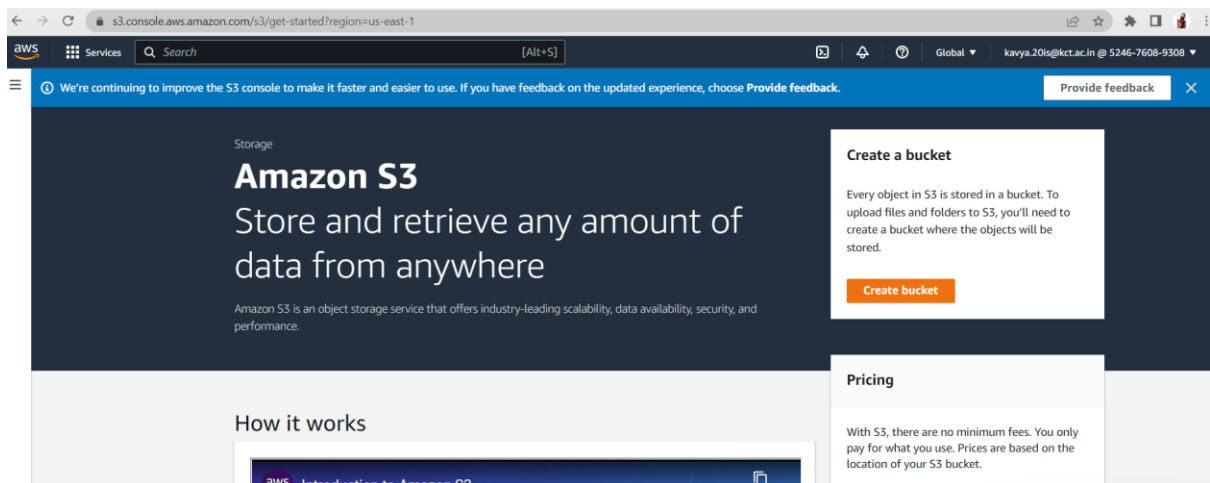

Required AWS services:

S3

Procedure :

1. Click create bucket in s3

2. Provide a name

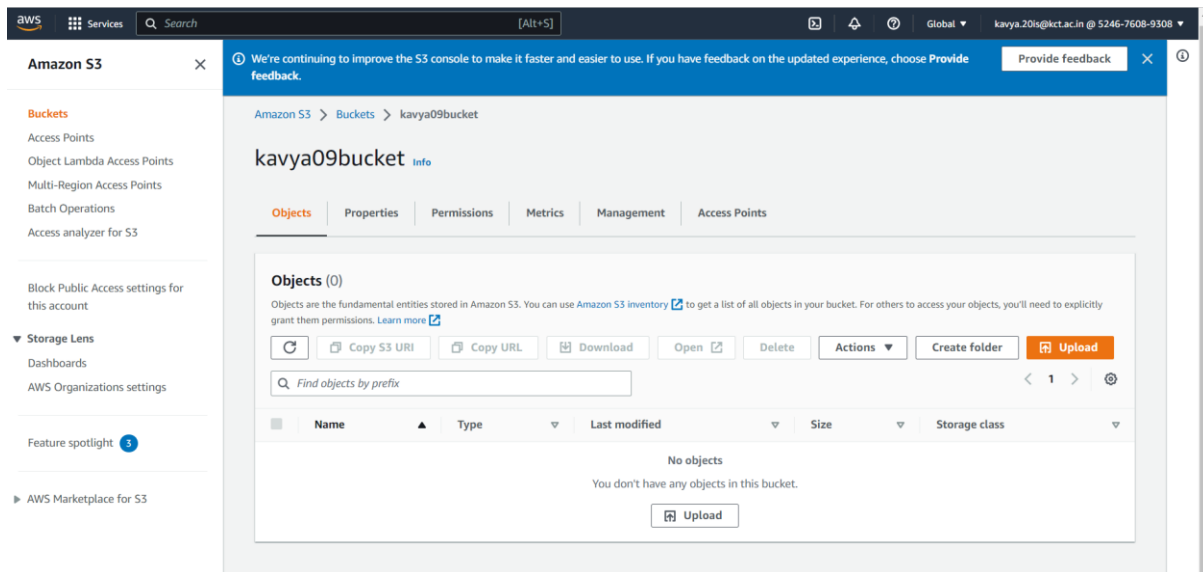

The screenshot shows the AWS 'Create bucket' console. The 'General configuration' section is active, showing the 'Bucket name' field with the value 'kavyabucket'. Below it, a note states: 'Bucket name must be globally unique and must not contain spaces or uppercase letters. See rules for bucket naming'. The 'AWS Region' is set to 'US East (N. Virginia) us-east-1'. There is a section for 'Copy settings from existing bucket - optional' with a 'Choose bucket' button. At the bottom, the 'Object Ownership' section shows 'ACLs disabled (recommended)' selected, with 'ACLs enabled' as an alternative option.

3. Uncheck “Block all public access”

Click create bucket

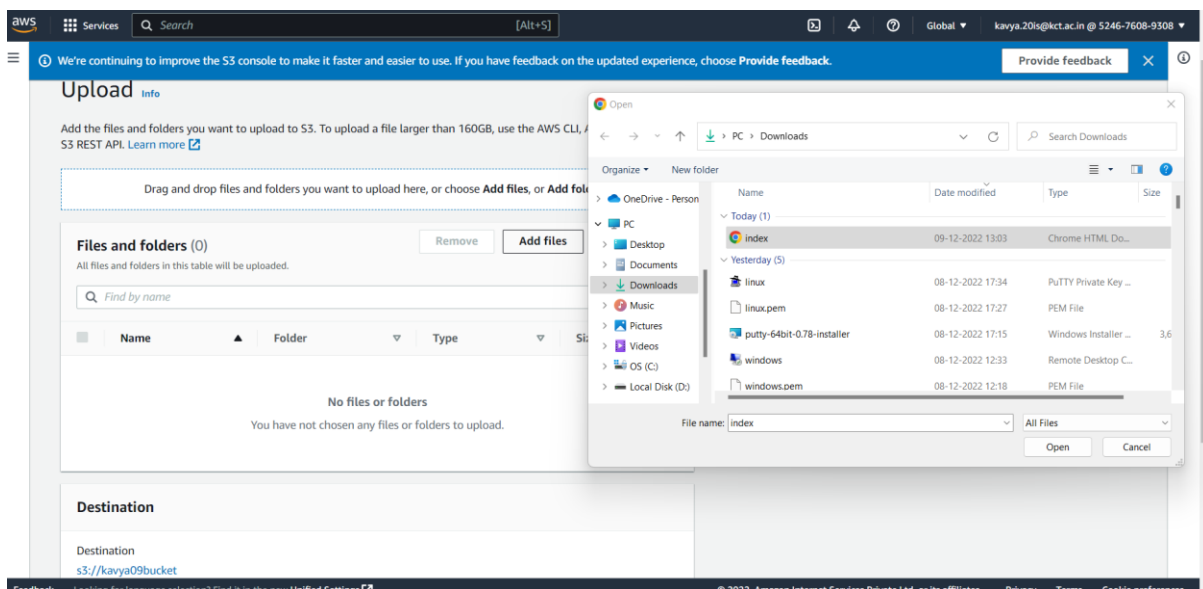

The screenshot shows the 'Block all public access' section of the AWS 'Create bucket' console. The 'Block all public access' checkbox is unchecked. Below it, four sub-settings are listed, each with an unchecked checkbox: 'Block public access to buckets and objects granted through new access control lists (ACLs)', 'Block public access to buckets and objects granted through any access control lists (ACLs)', 'Block public access to buckets and objects granted through new public bucket or access point policies', and 'Block public and cross-account access to buckets and objects through any public bucket or access point policies'. A warning box states: 'Turning off block all public access might result in this bucket and the objects within becoming public. AWS recommends that you turn on block all public access, unless public access is required for specific and verified use cases such as static website hosting.' At the bottom, a checkbox 'I acknowledge that the current settings might result in this bucket and the objects within becoming public.' is checked.

4. Select the bucket and click to open

5. To upload a website content

A simple html file is created and stored in the desktop in the name “index.html”

6. Click upload - Click add file- Chose index.html -Click upload - close

We're continuing to improve the S3 console to make it faster and easier to use. If you have feedback on the updated experience, choose [Provide feedback](#).

Amazon S3 > Buckets > kavya09bucket > Upload

Upload

Info

Add the files and folders you want to upload to S3. To upload a file larger than 160GB, use the AWS CLI, AWS SDK or Amazon S3 REST API. [Learn more](#)

Drag and drop files and folders you want to upload here, or choose **Add files**, or **Add folders**.

Destination details

Destination

Destination
s3://kavya09bucket

► Destination details

Bucket settings that impact new objects stored in the specified destination.

► Permissions

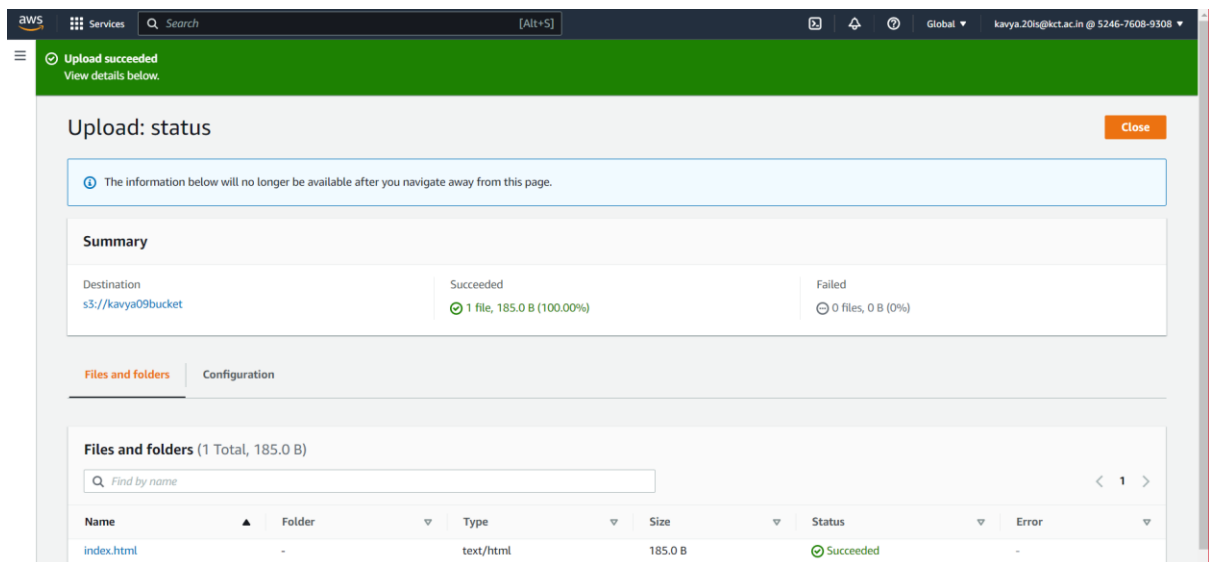

Grant public access and access to other AWS accounts.

► Properties

Specify storage class, encryption settings, tags, and more.

Cancel

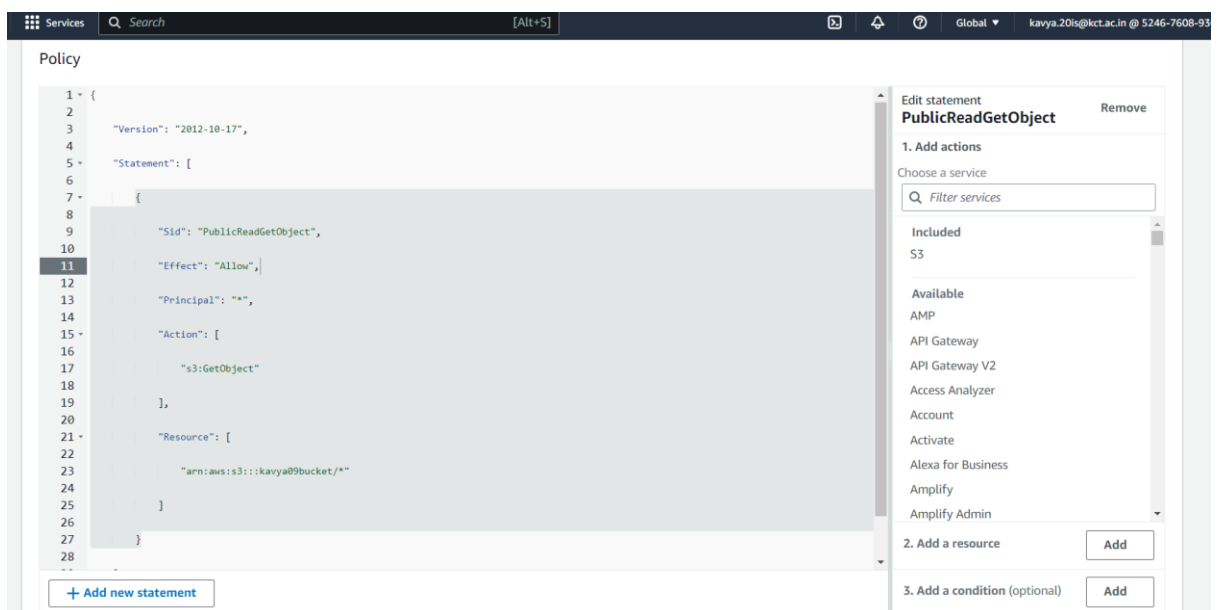

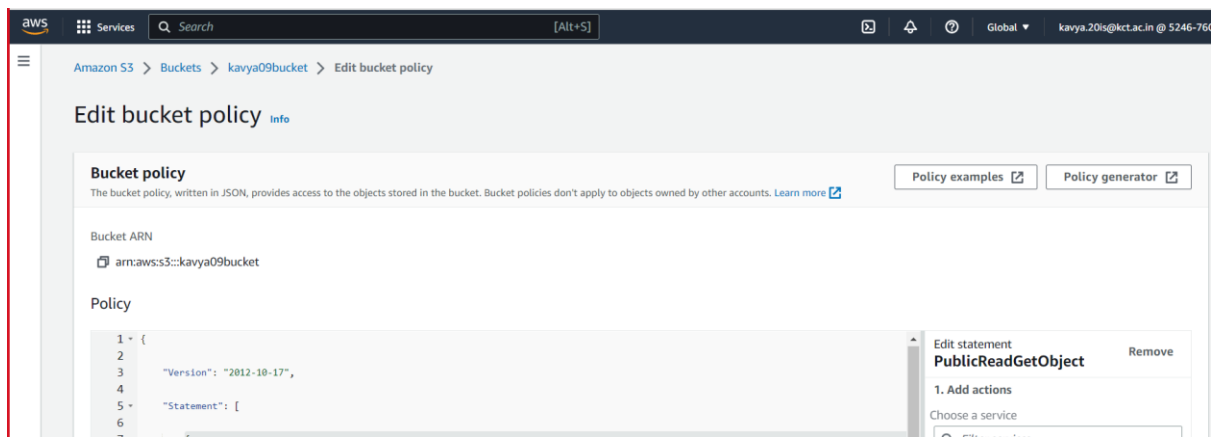

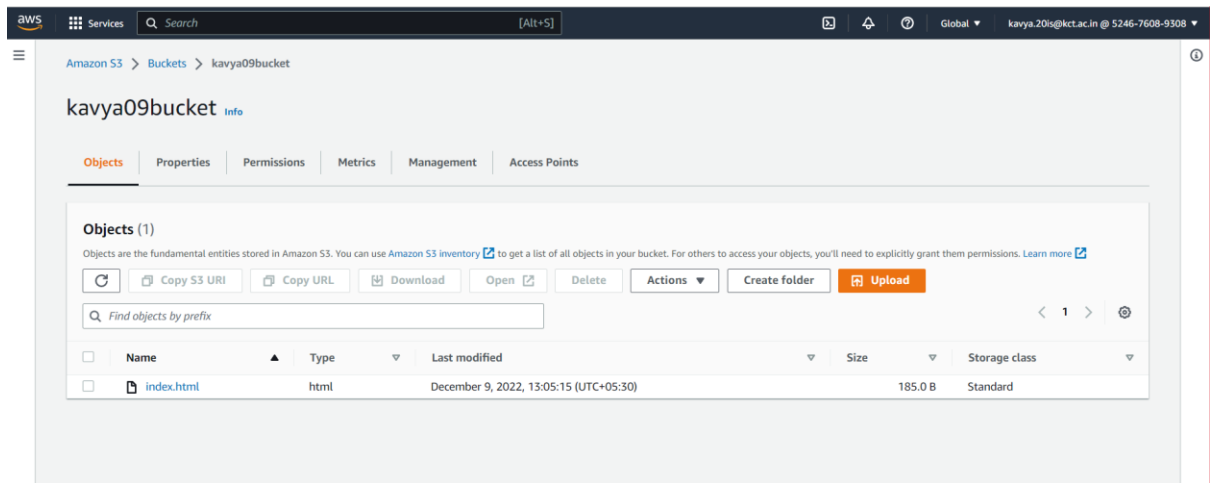

Upload

7. Click “permissions” - Enter the policy - Click edit

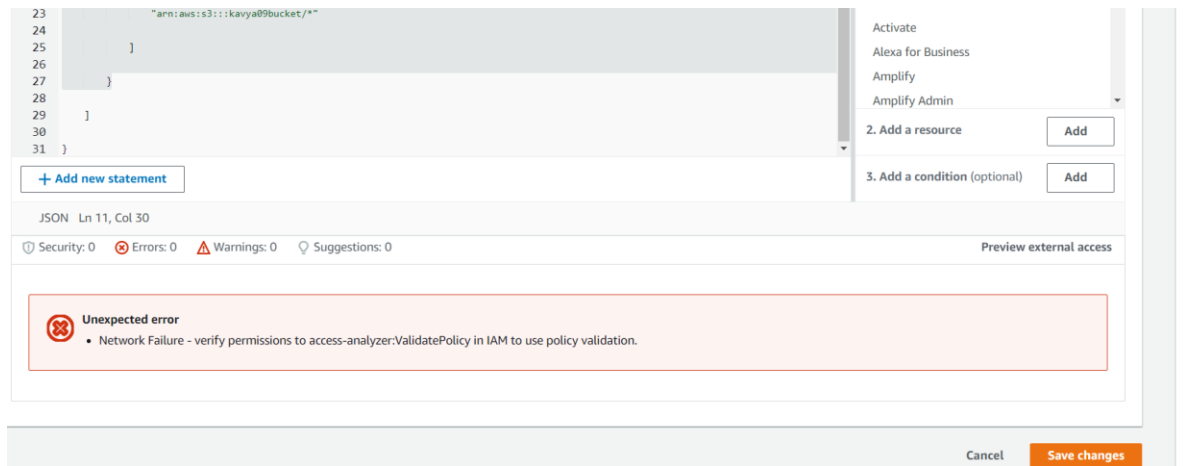

Replace the old one with the following code

```
{  
  "Version": "2012-10-17",  
  "Statement": [  
    {  
      "Sid": "PublicReadGetObject",  
      "Effect": "Allow",  
      "Principal": "*",  
      "Action": [  
        "s3:GetObject"  
      ],  
      "Resource": [  
        "arn:aws:s3:::Bucket-Name/*"  
      ]  
    }  
  ]  
}
```

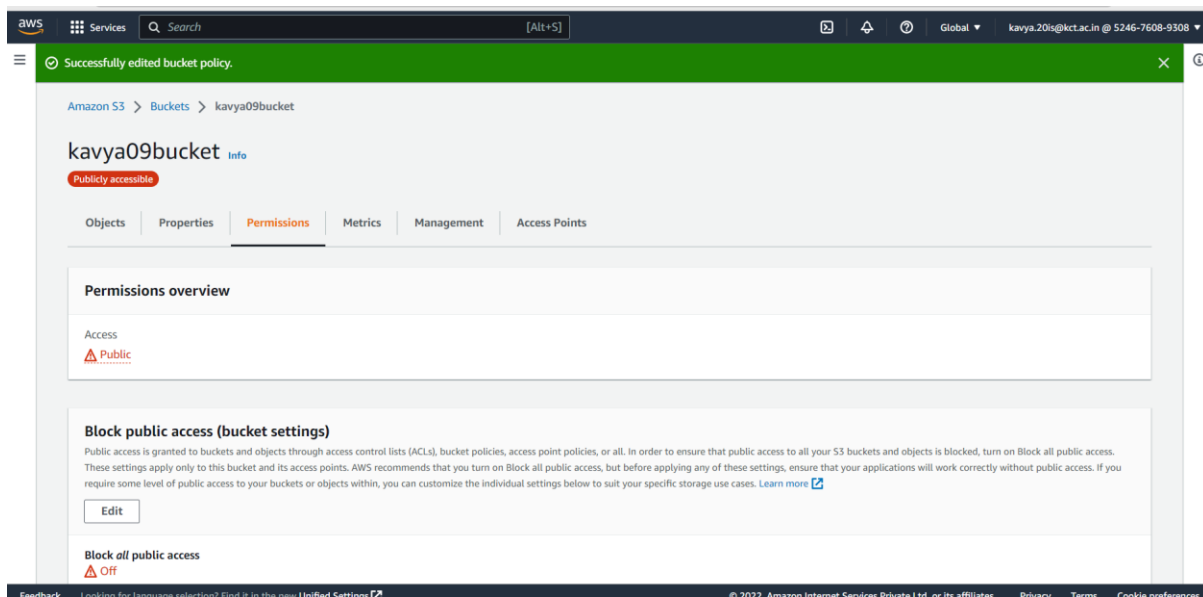

8. Note : in the above code bucket – name has to be given correctly

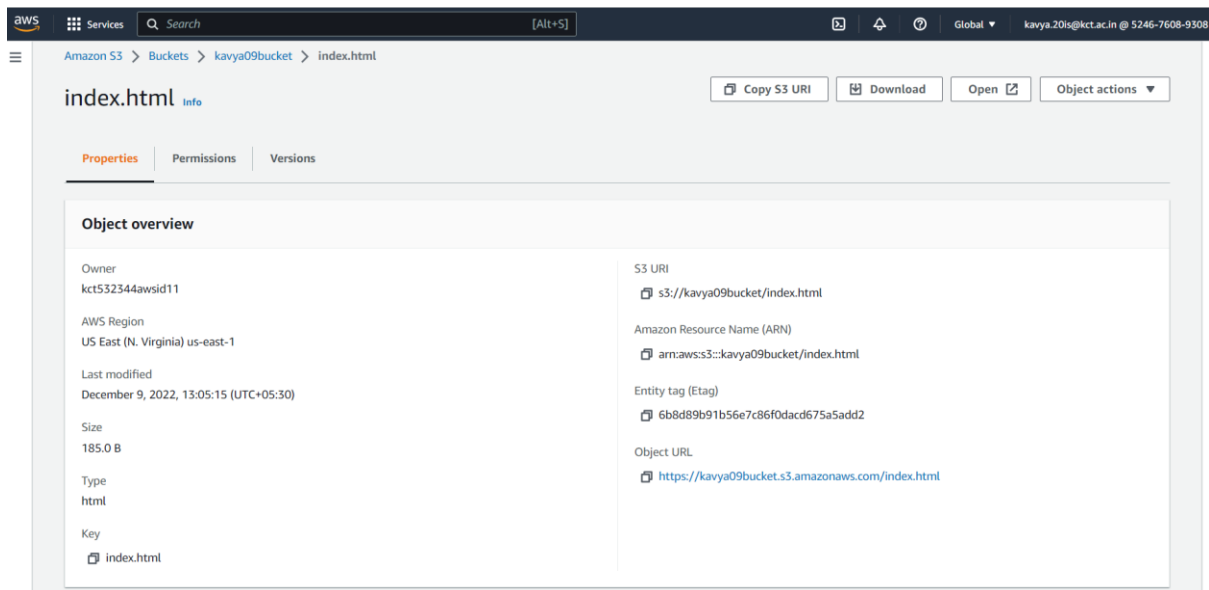

Click “save changes”

9. Click “Objects” - Select and click bucket

10. You can see object URL, Copy and paste it in a new tab or click it.

Objects (1)

Objects are the fundamental entities stored in Amazon S3. You can use [Amazon S3 inventory](#) to get a list of all objects in your bucket. For others to access your objects, you'll need to explicitly grant them permissions. [Learn more](#)

<input checked="" type="checkbox"/>	index.html	html	December 9, 2022, 13:05:15 (UTC+05:30)	185.0 B	Standard

Delete objects [Info](#)

• If a folder is selected for deletion, all objects in the folder will be deleted, and any new objects added while the delete action is in progress might also be deleted. If an object is selected for deletion, any new objects with the same name that are uploaded before the delete action is completed will also be deleted.

• Deleting the specified objects can't be undone.
